

Tuareg 2100

[Rif.: #006]

New factory beach cleaner machine, for which we preferred to abandon the idea of continuing production just because the production cost was too high and consequently with the normal sales price we would have been out of business.

Ideal for those who need to have a high waste load autonomy. The machine is equipped with a double box and can be unloaded directly into a truck body, or directly into the garbage bins. Included in the price we provide a pair of 20x20 mm hole grids, a pair of 10x10 mm hole grids and the cardan joint.

The machine is available at our office and we are available to supply it with the aim of recovering at least part of the production costs at the price of:

- 1) Euro 8,000 - in the state in which it is (fully functional)
- 2) € 10,000 - if we are going to make innovations / improvements / upgrades in use today on new production machines. In this solution, we are available to supply the wheels and their hydraulic adjustment system, which is very useful to better manage the working depth adjustment.
